

Eurofins Food Laboratories

Looking at the detail

Eurofins provides a comprehensive range of state-of-the-art analytical techniques to support our customers' in establishing the safety, composition, authenticity, origin, traceability and purity of our food.

Microbiology

Eurofins is one of the leading service providers for microbiological testing in the UK. Our testing portfolio includes pathogens such as Salmonella and Listeria, plus other organisms that indicate poor hygiene or contamination such as Staphylococcus aureus or Coliforms.

We provide reliable, accurate results which show compliance with statutory requirements. Regular testing helps manufacturers and suppliers ensure that food and water are safe and hence protect the consumer. In addition, Eurofins has an ongoing programme for the development and accreditation of the latest technologies such as Pathatrix combined with PCR for rapid Salmonella and Cronobacter sakazakii testing.

Nutritional Testing

Eurofins offers an extensive range of nutritional testing from our UK facilities to assist food manufacturers and suppliers with:

- Compliance with retailer specifications
- Due diligence and quality control
- Surveillance studies
- New product development
- Compliance with food labelling legislation

Pesticides

From our site in Wolverhampton, Eurofins can offer a range of targeted pesticide residue detection services including:

- Extensive multi residue determinations
- Comprehensive list of single analyte methods
- Analytes from Pesticide Safety Directorate surveillance programme
- Compounds in products imported from outside the EU

Eurofins has an unrivalled track record in consistent delivery of accurate results to an agreed turnaround time.

Achieving best value

Eurofins can assist our clients in achieving their regulatory obligations cost effectively through risk assessment, sampling plans and testing.
